

Reality is Minecraft

The Pyramids at Giza stand as one of the greatest enigmas in human history until now. If any society were to harbor a great secret, it would be the Egyptians. Reality is a simulation. Plato tells us that copies of reality are on walls of caves. Binary is how we build simulations on computers. There ought to be evidence for this in reality – there is. A zero and a one. That is binary. We see this in reality in electrons. A particle (one) and a wave (zero). What's interesting is we can influence it i.e. double slit experiment. How does this relate to Giza? Pyramidal structures focus electromagnetic energy. We are electromagnetic and we can influence particles. Giza used hydrochloric acid and hydrated zinc to make hydrogen – electrons. I wager the pharaoh utilized this to make reality as he saw fit.
